Interactive Lecture

Key Aspects

Enhanced interaction
Tiered floors
Unique benches & seating for collaboration
90, 120, 180 & 240 seating capacities
OVERVIEW
Interactive lecture theatres are designed to support interactive approaches to learning and teaching. They foster collaboration, discussion and group work, and offer new opportunities for staff teaching large classes. All chairs in the theatres are mobile, and two-way benches between rows allow students to work together facing each other in groups. Lectures might be structured to take advantage of this flexibility by interspersing opportunities for discussion, collaboration or project work into more traditional or didactic delivery modes. Breaking up a long timetable block in a large classroom in this way can help to improve engagement and attention, and encourage greater involvement from students in the learning process.

FEATURES
- Each theatre has tiered floors, mobile seating and fixed tables/benches.
- Unique seating and table configurations enable interactive and collaborative teaching approaches.
- Students in the first row of each tier will be able to work with students sitting behind them.
- The lectern is at the front of the theatre, providing easy access to audio visual controls.
- Wireless connectivity free instructors from the lectern to interact with the seated audience.
- Lighting presets can vary levels and point of focus to allow for various delivery modes. Seating layouts and lighting presets will work together to achieve focus.

TECHNOLOGY
- Main ceiling mounted data projector
- AMX controller and touch screen panel
- Analogue and digital sources: Locally installed PC, DVD/Blu-ray/media player; auxiliary inputs; Document camera (in 120 seat Interactive Theatres only).
- Lectern-mounted and wireless lapel microphones.
- Wireless mouse for mobile control of presentations.
- Lectopia/Echo 360 available in 180 and 240 seat Interactive Theatres.
- AMX control of lighting (fluorescent and downlights).
- Fixed connection points available at each table/bench.
- Wireless connection points for student mobile devices.
